1. Introduction

The purpose of the Terminal Description Book III is to give detailed information about the assigned terminals/marshalling yards along the ScanMed RFC.

In article 2.2.c of the Regulation (EU) No 913/2010 of the European Parliament and of the Council of 22 September 2010 concerning a European rail network for competitive freight, terminals are defined as follows.

"terminal" means the installation provided along the freight corridor which has been specially arranged to allow either the loading and/or the unloading of goods onto/from freight trains, and the integration of rail freight services with road, maritime, river and air services, and either the forming or modification of the composition of freight trains; and, where necessary, performing border procedures at borders with European third countries."

Book III of the Corridor Information Document contains the list and characteristics of terminals/marshalling yards, in particular information concerning the conditions and methods of accessing these.

In order that our partners always have access to the most up-to-date information, the cross-links to the websites of the terminal managers and to the Network Statements of infrastructure managers are provided for this purpose.

Information about private terminals and information about marshalling yards belonging to railway infrastructure managers are shown together in the tables below.

2. Terminal Overview

For more information, consult the Network Statements of the respective Infrastructure Managers:
